Andrej Karpathy ✓
@karpathy

There's a new kind of coding I call "vibe coding" where you fully give in to the vibes, embrace exponentials, and forget that the code even exists. It's possible because the LLMs (e.g. Cursor Composer w Sonnet) are getting too good. Also I just talk to Composer with SuperWhisper so I barely even touch the keyboard. I ask for the dumbest things like "decrease the padding on the sidebar by half" because I'm too lazy to find it. I "Accept All" always, I don't read the diffs anymore. When I get error messages I just copy paste them in with no comment, usually that fixes it. The code grows beyond my usual comprehension, I'd have to really read through it for a while. Sometimes the LLMs can't fix a bug so I just work around it or ask for random changes until it goes away. It's not too bad for throwaway weekend projects, but still quite amusing. I'm building a project or webapp, but it's not really coding - I just see stuff, say stuff, run stuff, and copy paste stuff, and it mostly works.

ANDREJ KARPATY / 2025

Vibe coding.

Describe. Build. Repeat.

Keep the conversation.

Review the code.

[Original post](#)

One click. Three parts.

Example: joining an event.

Frontend

What you see

Frontend UI mockup showing a form with the label "Your name", an input field containing "Sam", and a "Join" button.

Backend

Does the work

Backend logic box containing the text: "Adds Sam to the guest list."

Database

Remembers it

Database state box showing a "Guest list" header and the name "Sam" below it.

Our first website only needs the frontend.

Better words. Better results.

HARD TO ACT ON

”Make my website better.”

SPECIFIC ENOUGH TO CHECK

”Make the event details fit a phone.”

Keep the headline and photo. Stack the details.

What changes?

What stays?

How will we check?

The parts of a web page

- 1 Navigation**
Moves between parts of the site.
- 2 Hero + headline**
The opening section and main message.
- 3 Image / asset**
The visual content used on the page.
- 4 Call to action**
The main link or button, often called a CTA.
- 5 Content section**
A group of related information.
- 6 Footer**
Supporting links at the bottom.

HTML, CSS, and JavaScript

HTML

What is on the page

A heading, a photo, some text, a button.

CSS

How it looks

Colors, type, spacing, and phone layouts.

JavaScript

What happens

A click shows the next community photo.

HTML gives the content a structure.

THE SAME PAGE

Oslo Vibe Coding

Bring an idea. Build together.

AI tools you can build with

Claude Code

Works on project files, tests, and fixes.

Codex

Helps build, review, and improve code.

Cursor

An AI coding editor for your project.

GitHub Copilot

Coding assistance and agent workflows.

Replit Agent

Build and run an app in the browser.

v0

Generate interfaces and web apps.

Lovable

Build web apps through conversation.

Bolt

Create websites and apps in the browser.

A selection, not a ranking. Features and limits vary.

You direct the work

Think about the experience you want.
Then talk to your coding agent.

You decide

The purpose, the experience, and the priorities.

AI works on the code

Plans, builds, and makes changes.

You test the result

Try it. Give feedback. Decide what ships.

Six rules for building with AI

01 Describe the outcome

Who is it for? What should it do?

03 Ask for a plan first

Clear up questions before building.

05 Show the evidence

Use a screenshot, an error, or an exact example.

02 Give it the context

Share content, images, and constraints.

04 Change one thing

Keep unrelated parts of the page intact.

06 Check before sharing

Test it. Keep secrets out.

From your files to a live website

Your project

The files you edit and preview.

HTML + CSS + JavaScript

GitHub

The project and its saved versions.

Repository = project folder + history.

Vercel

Publishes your site at a public URL.

Deploy means publish a version.

Other hosting routes: GitHub Pages and Replit Publishing.

Let's build Oslo Hack

Build it together. Publish it on Vercel.

The visitor

Someone looking for people to build with.

The first version

A headline, a photo, and a button that opens the plan.

The result

A working page to share.

[Open the example ↗](#)

A tool, a project, and a browser

01

Choose a tool

Open Claude Code, Codex, or your preferred coding tool.

02

Create a project

Create a folder named oslo-hack.

03

Prepare to publish

Sign in to GitHub and Vercel.

OUR SMALL PROJECT

index.html style.css script.js photo.jpg

Browser builders need a file export or GitHub connection.

Plan the page

Navigation	Oslo Hack	
Headline + photo One clear button		
Meet	Build	Share
Footer	Community link	

Must have

A clear headline, the supplied photo, and a button that opens the plan.

Keep it small

No account, payment, signup form, or database.

Done means

The button works, the phone layout fits, and the public link opens.

Our first build prompt

Describe the website, not every line of code

```
Build a one-page website called Oslo Hack.  
It helps people in Oslo find others to build small projects with.  
Use photo.jpg. Colors: #110F17, #FBF7F0, #FF5A2C.  
Include navigation, a headline, an intro, Meet / Build / Share, and a footer.  
Add a button that shows and hides a short session plan.  
Use index.html, style.css, script.js, and photo.jpg. No libraries.  
Make it work on a phone. Do not add login, payments, or a database.  
First explain your plan and ask about missing information.
```

Copy prompt

After agreeing on the plan: "Go ahead. Build it and tell me how to preview it."

Try the website as a visitor

- The purpose is clear from the headline.
- The photo and styles load.
- The plan opens and closes.
- The phone layout fits without sideways scrolling.
- Links and keyboard navigation work.

0 / 5

Ready to check

Expected: the plan opens.

Actual: nothing happens.

Evidence: show the agent the page.

Skills: reusable recipes for your agent

The job

Review this website before publishing.

The checks

Phone layout, keyboard access, working links, and clear button labels.

The output

Issues, fixes, and retest results.

Example review recipe / instruction body

```
# Website review
1. Open desktop and phone layouts.
2. Check images, links, and buttons.
3. Test Tab and Enter navigation.
4. Describe issues with evidence.
5. Fix agreed issues, then retest.
6. Ask before publishing.
```

Save Oslo Hack in GitHub

01

Create a repository

Name the project oslo-hack.

02

Add the files

Upload the website files and photo at the top level.

03

Commit the version

Save a checkpoint with a short description.

oslo-hack

index.html

style.css

script.js

photo.jpg

Commit message
First working website

Upload project files only. Keep passwords and keys out.

Publish the project on Vercel

1. New Project

Connect GitHub and select your oslo-hack repository.

2. Import

Confirm the project folder contains index.html.

3. Deploy

Publish the project and open the URL Vercel gives you.

▲ For our plain-file project

Framework Preset	Other
Build Command	Override: leave empty
Output Directory	. (project root)

Plain HTML, CSS, and JS need no build step.

The public link is the real test

YOUR DEPLOYMENT ADDRESS

`your-project.vercel.app`

Example address. Use the URL Vercel gives you.

01

Open it elsewhere

Try a private window or another device.

02

Try the page again

Check the photo, layout, button, and links.

03

Share the working link

Ask someone else to try it.

Check deployment protection if visitors cannot open the link.

Add one feature: an FAQ

A small follow-up prompt

Add a three-question FAQ below the content.
Each answer opens when clicked.
Keep the headline, photo, colors,
and plan button unchanged.
Check phone layout and keyboard access.
Show me which files changed.

Copy prompt

[Open the updated example ↗](#)

Frequently asked questions

- ▶ Do I need coding experience?
- ▶ What should I bring?
- ▶ Can I come without an idea?

Review the change, commit it, and the connected Vercel project deploys the update.

[Source](#)

When your website grows

More content

Add a section in the frontend.

Shared information

Registrations need a backend and database.

More visitors

Measure speed, errors, and cost.

ASK THE AGENT

"What needs to change for this feature, and what can stay simple?"

Show us what you built

Open your website. Let someone else try it.

01

What is it?

Who is it for, and what can they do?

02

Show one interaction

A button, an answer, or a useful change.

03

What did you learn?

What improved after feedback?

Coming next: focused workshops

01 Context + specifications

Project knowledge, LLM wikis, and clear requirements.

02 Goals + feedback loops

Define done, check results, and improve one step at a time.

03 Agents + harnesses

Tools, skills, memory, tests, and safe boundaries.

04 Products that grow

Backends, databases, security, and deployment workflows.

Dates and registration coming to oslovibecoding.tech.

Thank you.
